

# SAN Receiving and Distribution Center Highlights

**IMPROVED OPERATIONAL EFFICIENCY** The 23,000 square foot facility provides the San Diego International Airport with a centralized delivery location for food, beverage, retail and other goods **eliminating the duplicity, pollution, traffic, and costs associated with multiple logistics supply chain networks and number of smaller facilities scattered throughout the airport complex.**

**ENHANCED AIRPORT SAFETY AND SECURITY** By establishing a single operations center with a **highly controlled and monitored supply chain**, the new Receiving and Distribution Center **dramatically reduces the threat of a compromised distribution operation.**

**A WORLD FIRST IN SUSTAINABILITY** The United States Green Building Council has awarded the San Diego RDC with a LEED Gold Certification, making it the first facility at San Diego to receive such an honored designation and **the only receiving and distribution center in the world to have earned that certification.**

**REDUCED ROADWAY AND PASSENGER SECURITY SCREENING CHECKPOINT CONGESTION** The centralized location and operation of the RDC has **reduced delivery truck traffic on the passenger roadways by 50-75 trips a day and virtually eliminated screening requirements at the security screening checkpoints in the passenger terminals.**

**IMMEDIATE COST SAVINGS** With the comprehensive installation of leading sustainability practices, water efficient plumbing utilizes 40% less potable water and drought tolerant landscaping **reduces the facility's overall water consumption by 54%.**

**EXEMPLARY PUBLIC PRIVATE PARTNERSHIP** By partnering with AFCO, the San Diego County Regional Airport Authority was able to acquire **essential facilities without using its bonding capacity and complete the project under an accelerated timetable** that would not have been possible under a traditional airport project procurement model.
